

## Practice 8 Repetition + File

Copy, paste contents of this practice file (using note pad or word pad or any other editor) to save in a file "text.txt".

1. Open this file in your python program and read it line by line and print
2. Read this file line by line and print numbers only (don't display other contents)
3. Read this file and display total number of questions/ tasks
4. Read this file and count number of words in this file
5. Read this file and write into another file "newtext.txt". Open this new file in note pad or word pad or any other editor to see the contents of new file
6. Read this file and write into another file without spaces, compare size of both files
7. Read this file and write it into another file, replace numbers with hyphen
